

Provider Directory API Compliance: What it is and how Ribbon helps.

Under the CMS Interoperability and Patient Access final rule, CMS-regulated health plans will need to make provider directory information available via a FHIR-based Provider Directory API. While regulations can be daunting, APIs are quick to implement and should provide zero disruption to your workflows. Here at Ribbon, innovative healthcare organizations trust us to enhance provider data via a seamless API layer.

You can rest assured you are compliant with this new requirement by deploying Ribbon's Provider Directory API in hours with minimal resourcing.

Background

- **Goal:** To improve visibility and accessibility of in-network providers for all stakeholders
- **Deadline:** All CMS-regulated health plans must make their provider directories readily available via API by Jan 1 2021.
- **Impact:** Health plans may work with API developers to distribute these provider directories via compliant API. These directories must be publicly accessible, and the documentation and supporting information must also be readily available.

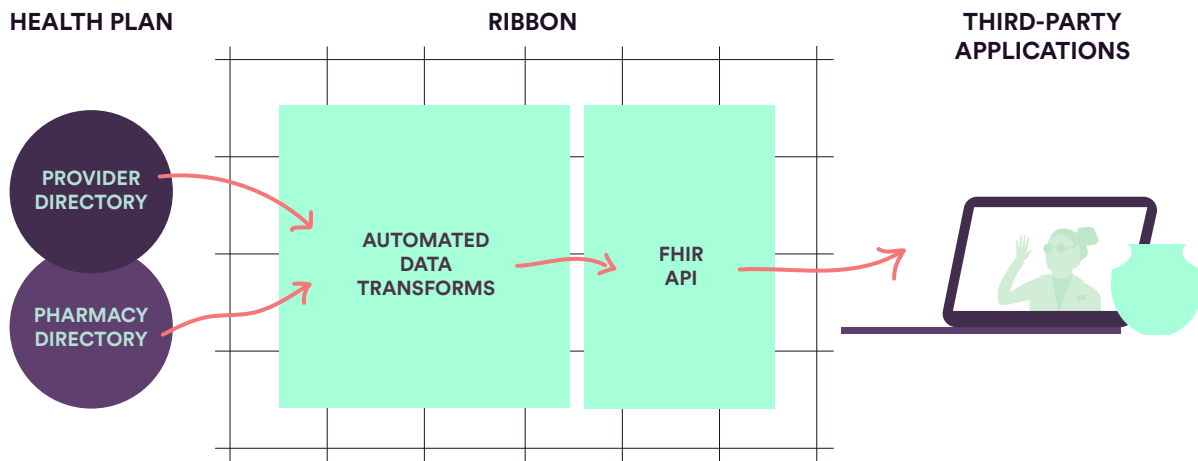

How Ribbon Helps

- **API built for compliance:**
 - API Architecture: RESTful API
 - Data Structure & Design: HL7 FHIR®
 - Security: Authorization and rate limiting
- **Supportive data services:**
 - Simply share data in any format and Ribbon will ingest, transform to compliance standards, and make available in your workflow.
- **Seamless implementation:**
 - Deploy directly in your preferred workflow, eliminating the need for workflow or behavior change.
- **Continuous compliance & accuracy monitoring:**
 - Ensure that you and your team remain up-to-date and compliant beyond initial deployment.

Simple Implementation

About Ribbon Health

Ribbon Health makes it easy for every health care decision to be high quality, cost-effective, and convenient. Ribbon empowers health plans, providers, and digital health solutions through accurate provider directories, reliable referral management, and efficient care navigation. Ribbon offers a seamless API layer that integrates into existing workflows to build connectivity across the industry and continuously improve the accuracy of its data with its spread and use. Ribbon's highly accessible and performant platform is powered by comprehensive data on doctors, insurance plans, and the cost and quality of care, culled from thousands of sources. For more information, find us at <https://www.ribbonhealth.com/> or on Twitter as @ribbonhealthAPI.
